**SELECTed™**  
**SexedULTRA™ 4M**

**Exclusive sexed-semen product available from Select Sires.**  
Learn more through the answers to frequently asked questions below or contact your representative today!

**Is a 4 million sperm dose better than a conventional dose of Select Sires semen?** No. Our study has shown that a 4 million sperm dose in Holstein heifers has a conception rate that was 78 to 80 percent of the conception rate of Select Sires' conventionally processed semen. These results were statistically significant.

**Does a 4 million sperm dose provide better fertility than a 2 million dose?** Yes. SexedULTRA 4M has shown a conception rate advantage of 3 to 5 percent in Holstein heifers based on the results of a recent trial conducted by Select Sires within some of the partner herds participating in the Program for Fertility Advancement™.

**Can this product be used on cows?** SexedULTRA and SexedULTRA 4M can be used on cows. You can expect to see reduced conception rates in cows, however the results between 2 million and 4 million will be closer than in heifers. We recommend use for first or second services on cows showing strong, healthy heats.

**How will this product be labeled?** The '509' stud code prefix will be included for Select Sires bulls and the '559' stud code prefix for GenerVations bulls. Straws and cane tops will be yellow.

**Will bulls have both 4 million and 2 million available?** No. At this point, bulls will either be available as SexedULTRA or SexedULTRA 4M, not both.

**Now available *gender* SELECTed SexedULTRA 4M**
