

PUT YOUR CALVES IN THE BLACK!

Add more value to your herd's lower-end genetics - breed them to Angus, Simmental & SimAngus bulls from Select Sires! Your resulting crossbred calves will have more muscle, better growth performance and improved feed efficiency, which is very important. Plus, they'll be more vigorous at birth. When you use Select Sires Angus and SimAngus, the calves will be predominately black, which can earn premiums over traditional Holstein-marked calves.

ANGUS: The Angus bulls featured here are above average for Calving Ease Direct (higher numbers are more desirable) in a breed known for easily-born calves and they're high for \$Beef (\$B), an index that evaluates post-weaning gain and end-product value. High \$B bulls bring home the most dollars at harvest!

Residual Average Daily Gain (RADG), is a predictor of a sire's genetic ability for postweaning feedlot gain in future progeny. In other words, cattle with higher RADG values perform better on fewer inputs.

SIMMENTAL & SIMANGUS™: The Simmental & SimAngus choices excel for TI (Terminal Index — a Simmental index that ranks bulls based on their ability to excel for both quality grade and yield at harvest). These breeds are known for their ability to sire performance with muscle. Blended with Angus, Simmental & SimAngus bulls make a great cross on Holstein cows.

When you use Select Sires' Angus or SimAngus bulls, you're creating opportunities for more value. The calves are worth more, they gain better, grow faster and deliver a high-quality carcass when compared to straight-bred Holstein calves. Contact your Select Sires representative for more information.
