

ROBOTPRO[®]

Offspring will be robot-reliable

Use RobotPRO sires to create the next generation of profitable cows for your robotic milking system! By including evaluations for Milking Temperament, cattle are bred to be calm and comfortable for an easy, trouble-free milking routine.

Geared toward critical robot management factors

Sires are selected with emphasis on maximizing the pounds of milk, fat and protein yield per minute of robot time. Udder Floor evaluations are also included to avoid extreme reverse tilt and ensure the sensors can effectively locate rear teats.

Formulated with an emphasis on health and wellness

Expect daughters to perform well with minimal management issues and to transition quickly. Sires have low Somatic Cell Scores (SCS) and high mastitis resistance.

RobotPRO assures correct Rear Teat Placement and Teat Length for your robots.
