

MASTITISRESISTANTPRO[®]

Avoid costly mastitis cases and save money

A case of clinical mastitis in the first 30 days of lactation can result in an economic loss of \$444 (\$128 in direct costs and \$316 in indirect costs), including loss of future milk production, premature culling and replacement loss, and future reproductive loss¹.

Reduce waste milk and keep valuable replacements in the herd

Mastitis is a leading reason for voluntary culling, especially in cows beyond the first lactation. The most common clinical disease in cows reported by producers is mastitis (24.8 percent of cows)². Fewer mastitis cases means less discarded milk and reduced treatment cost in all management systems.

Lower antimicrobial use

Over twenty percent of all lactating dairy cows receive antibiotic therapy for clinical mastitis each year and many cows receive intramammary infusions as they go dry². Improving genetic merit for mastitis resistance will reduce use of antimicrobials.

A genetic solution to mastitis resistance

Sires that excel in multiple indicators of mastitis resistance are more likely to deliver genetic improvement. Mastitis ResistantPRO uses a combination of CDCB Mastitis Resistance, CDCB Somatic Cell Score (SCS) and Zoetis Mastitis Resistance genomic evaluations.

All bulls qualify for semen export to Canada except COBOT. 7 and 507 = Select Sires; 14 and 614 = Accelerated Genetics; 250 = Genervations; 9 = Universal Marketing Code; 744 = Showbox Sires. Limitations and Conditions of Sale: gender SELECTED semen shall be used only for the single insemination of one female bovine during natural ovulation with the intent to produce a single offspring unless specifically approved on an individual customer basis by Sexing Technologies in writing. As a condition of purchasing gender SELECTED semen, the purchaser agrees that gender SELECTED semen will not be reverse sorted or re-sorted unless specifically permitted, in advance, on a case-by-case basis by Select Sires in writing. Select Sires intends to monitor the use of the gender SELECTED semen and vigorously enforce these restrictions on use. Please see <http://www.selectsires.com/designations/gendersselected.html> for additional details. When you purchase semen of a bull carrying the Mastitis ResistantPRO designation, the resulting offspring will likely carry characteristics listed for this designation.
